

Thank you for visiting with us at **Logistics Summit.**

We appreciate the opportunity
to share what we do.

And look forward to
what we can do—
together

RIDECCELL

Move the world better.

Because smarter utilization of our resources is vital to our planet, we believe that better solutions benefit us all. Our roots in shared mobility are deep—providing the best mobility platform in the industry.

And now, with our fleet automation and mobility platform, we're bringing solutions to even more fleets.

So whatever your fleet type, Ridecell accelerates digitization and intelligent automation of fleet based businesses to create a more sustainable, safer, and productive future.

The Ridecell Fleet IoT Automation Platform

While connected vehicles in your fleet create data, your fleet management systems create insights. Ridecell orchestrates it all to create automations that act on insights—even connecting with your repair centers and 3rd party vendors for parts and services.

Digital Vehicle Access and Control

Digital access and immobilization is the key to everything. And while you'll have to forgive the wordplay, when it comes to access and security, we don't play at all.

Your fleet is a critical asset. When you combine powerful, automated workflows with secure digital access, you can achieve things with your fleet that were previously impossible—all while increasing security and compliance.

- **Automatically assign a driver to another vehicle without needing to get them a physical key.**
- **Allow maintenance workers temporary access to vehicles. In the shop or in the field.**
- **Greatly reduce the risk of theft while increasing the speed of asset recovery.**
- **Automatically lock a vehicle when the driver is away, unlocking upon their return.**

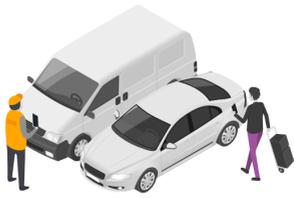

Powerful data management and workflow automation for every size and type of fleet.

Shared

The solution for running a free floating, station based, scheduled and on-demand carsharing service.

Rental

The solution for car, truck and van rental fleets that brings corporate and individuals a self-service rental process while providing greater security and automation for routine tasks.

Motorpool

The solution for corporate and government motorpool fleets to create more efficient fleets and serve more users without adding resources.

Logistics

The solution for last mile delivery vehicles and logistics fleets to streamline operations with actionable insights and automation.

Security

The solution for all fleets needing protection around the clock with a fully-automated security management solution that knows when to disable digital keys, trigger immobilizations and notify authorities.

We would love to find out more about your business needs and how we can help automate your fleet.
