

Ridecell Fleet IoT

Powering digital transformation for fleets.

The insights, automation, and control
to transform your business.

Insight Management

From collecting to activating data

Turn your insights into actionable automated workflow triggers, whether they come from our system or yours.

Digital Vehicle Control

From physical to remote control

Unlock workflows by distributing digital keys, controlling access, and immobilizing vehicles without lifting a finger.

Workflow Automation

From manual to hands-off operations

Use business rules and digital integration for “self-acting” fleet control that prioritizes, manages, and resolves alerts and tasks on its own.

Fleet IoT Solutions

Improve operational efficiency and revenues from your fleet

Shared

The solution for running a free floating, station based, scheduled and on-demand carsharing service.

Rental

The solution for car, truck and van rental fleets that brings corporate and individuals a self-service rental process while providing greater security and automation for routine tasks.

Motorpool

The solution for corporate and government motorpool fleets to create more efficient fleets and serve more users without adding resources.

Logistics

The solution for last mile delivery vehicles and logistics fleets to streamline operations with actionable insights and automation.

Security

The solution for all fleets needing protection around the clock with a fully-automated security management solution that knows when to disable digital keys, trigger immobilizations and notify authorities.

The Fleet IoT platform brings the power of digital transformation to fleets. Now Fleet IoT solutions extend the platform with fleet specific solutions packaged for your fleet type. For shared and rental fleets, our solutions help grow the bottom line with fleet monetization and optimization capabilities purpose-built to meet the needs of your service. And for last mile logistics and motorpool fleets, the solutions for these fleet types let you manage your fleets more efficiently leading to more uptime and dramatically lower cost of operations.
