

## Supplier Intelligence

# AI-powered supplier performance management for FMCs.

**AI-aggregated financial and operational data to track closed-loop spend, automate workflows, and ensure SLA compliance across all vendors.**

## Maximize value from your supplier ecosystem—seamlessly

With the complexity of managing hundreds of suppliers across the vehicle lifecycle, keeping track of transactions, costs, and SLAs with incomplete data has been a constant challenge. Many suppliers, especially small independent shops, still rely on spreadsheets and phone calls for communication, making true digital integration nearly impossible—until now. Your team can use Ridecell 360 to leverage the power of AI agents that can read contracts, call suppliers for updates, and generate reports.

## Centralized contract and SLA tracking

Supplier performance management with Ridecell 360 enables digital integration, even with the smallest of your vendors, by automating the mechanisms that you have in place today. Whether it's logging into supplier portals to generate reports or calling suppliers directly to get status updates, AI agents handle it all. AI-powered voice agents can communicate with suppliers just like a human, while AI-driven data processing transforms each vendor's unique formats into structured data.

Ridecell 360 scans supplier contracts to understand all of the contract terms so it can monitor every SLA in real time. With accurate, up-to-date data and automated contract enforcement, you can reduce costs, minimize delays, and hold suppliers accountable.

## Automated spend monitoring

By gathering all supplier costs and performance into a single system, you're able to benchmark performance against peer suppliers. With knowledge of contract terms, the supplier performance management system will compare performance against SLA targets, compare billed prices versus negotiated pricing and then automatically direct work to the best performing supplier.

## AI-driven performance insights

AI-powered voice agents can communicate with suppliers just like a human, while AI-driven data processing transforms each vendor's unique formats into structured data.

## Fully automated supplier workflows

Scale operations efficiently with AI-powered automation.

## Ridecell 360

### The power to optimize your fleet and leasing business

See systemic issues across the entire vehicle lifecycle, quickly resolve high impact bottlenecks and analyze and optimize your business across the entire vehicle lifecycle

### Ridecell Intelligence

Continuously surface intelligent insights and create unified visibility for your clients, drivers, employees, and vendors

### Visualize your processes

Create digital visualization of your current process for business & operations

### Identify blind spots

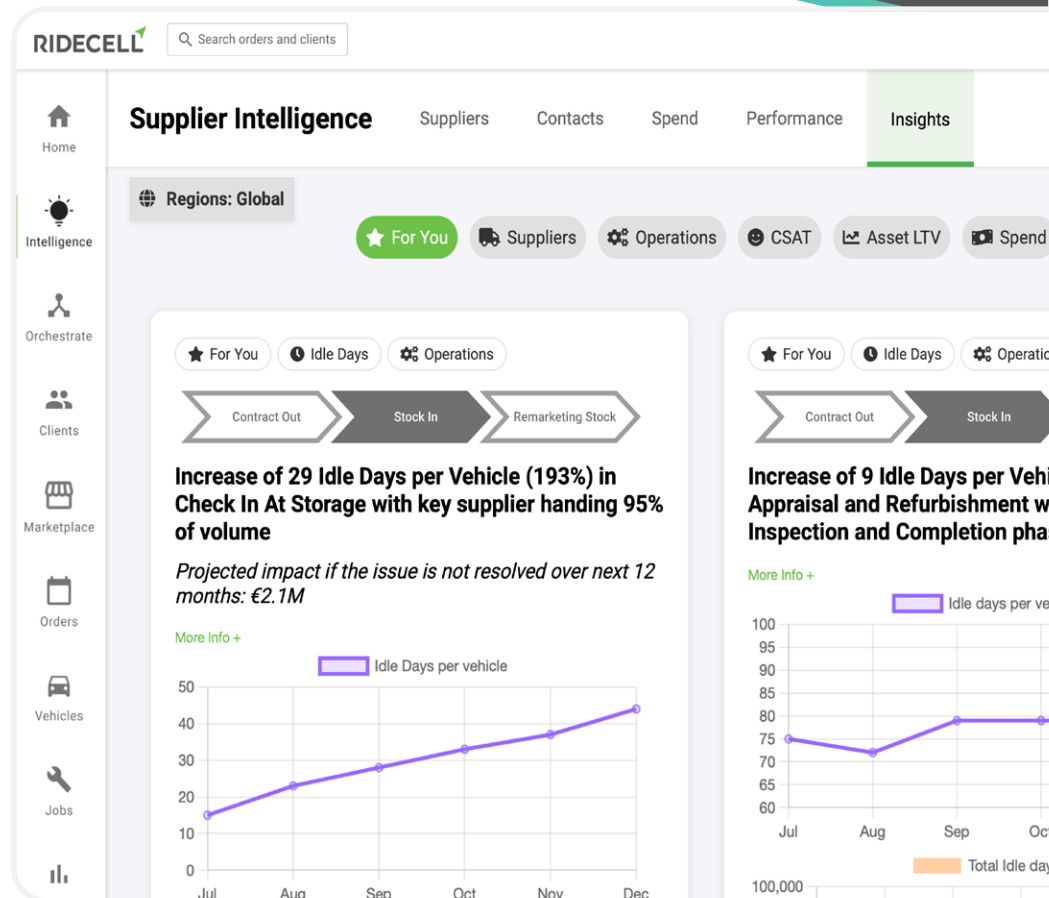

Complete end-to-end process and data visibility

### Real-time intelligent insights

Aggregate AI-assisted insights and recommended actions from multiple systems

### Improve customer experience

Provide clients with a unified view of their fleet status

### Ridecell Orchestration

Digital orchestration to automate operations & decision-making, driving profitability and customer satisfaction

### Intelligent actions

Automate actions based on insights surfaced by Ridecell Intelligence

### Maximize asset lifetime value

Optimize delivery time, utilization and remarketing value to ensure maximum asset lifetime value

### Increase employee productivity

Reduce manual data entry so your staff can focus on business-critical activity

### Differentiate service offering

Automatically resolve customer issues to increase your customer satisfaction
